                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method for the prevention or inhibition of breast cancer cell proliferation. The method comprises administration of a compound that inhibits the interaction of a sex steroid receptor with a sex steroid response element of the Cyr61 (cysteine rich heparinbinding protein) promoter. Cyr61 has cytostatic activity. An antibody (I) which neutralises Cyr61 can be used to prevent or inhibit breast cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Regulation of Cyr61 expression and activity for preventing and inhibiting breast cancer comprises use of a Cyr61 neutralizing antibody, an antisense oligonucleotide and an antibody which.

The present invention relates to a method for stimulating angiogenesis in a mammal. The method comprises administering a polynucleotide encoding connective tissue growth factor-2 (CTGP-2) or an active fragment or its connective. The method is useful for stimulating angiogenesis in a mammal preferably human having ischaemia or restenosis or is treated for limb revenuexisation which is leg or arm. The invention is useful for inhibiting tumour growth, where angiogenesis is utilised for enhancing the repair of connective and support tissue, promoting the attachment, fixation and stabilisation of tissue implants and enhancing wound healing, hence is useful for treating cardiovascular disease e.g. atherosclerosis, reperfusion injury such as heart failure, angina, and is also used to differentiate, proliferate and attract calls leading to regeneration of tissues which is utilised to repair colls leading to regeneration of tissues which is utilised to repair upor y age, disease (e.g. osteoporosis, periodontal disease, liver allure), surgery including cosmetic plastic surgery. The present cover proceed is human CTGF-2 gene is useful in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Stimulating angiogenesis in a mammal preferably human having ischemia restenosis or is treated for limb revascularization, by administering connective tissue growth factor-2 polypeptide or polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The present invention relates to the isolation of human connective tissue growth factor 2 (CTGF-2), and the polyuncleotide sequence encoding it. The CTGF-2 polypeptide is useful for enhancing the repair of connective and support tissues, for treating skin disorders such as injuries, acne, UV damage or burns, and wrinkled skin, for promoting attachment, fixation and stabilisation of tissue implants, and as an immunogen to produce
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New human connective tissue growth factor 2 polypeptides and polymuleotides useful for enhancing repair of connective and support tissues, and for treating skin disorders, e.g. injuries, acne, UV damage or burns, and wrinkled skin.
                                                                                                                                                                                                        Human, connective tissue growth factor 2, CTGF-2, support tissue, tissue repair, skin disorder; injury, acne; UV damage; burn; wrinkled skin; tissue implant; vulnerary; antiaging; dermatological; antiseborrhoeic.
                                                                                                                                                                               Human connective tissue growth factor 2 (CTGF-2) #1.

AAC77607 to AAC78448 encode the human cancer associated proteins given in tissues and calls the genes are expressed in. Example of activities tissues and calls the genes are expressed in. Example of activities include: cytocatic; proliferative; vulnerary; immunomodulator; antidabetic; antiathmatic; antitheumatic; antiathritic; antidabetic; antiathmatic; antitheumatic; antidathritic; antidabetic; antipaterary; immunomodulator; antidabetic; antibaterary; immunomodulator; antidabetic; antipaterary; immunomodulator; antidaterary; antibathritic; antidabetic; antidaterary; immunomodulator; antidate; or polymunolectices and polypeptides can be used for preventing, treating or ameliorating medical conditions and diagnosing pathological conditions. Polymucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of harmatopoietic cells, autoimmune cisculate haemostatic or thromolytic activity, modulate disorders, allege reactions, graft versus host disease and organ rejection, modulate haemostatic or thromolytic activity, modulate inflammation, cancers, cardiovascular disorders, neurological disease and appearance or viral infections. The peptides, mucleotides, antibodies, agonists and antagonists may be also be used in the exemplification of antagonists may be also be used in the exemplification of

antibodies. The polynucleotide sequence encoding CTGF-2 may be used as a hybridisation probe for a cDNA library to isolate the full-length cDNA and other cDNAs, which have high sequence similarity to the CTGF-2 gene or similar biological activity. The polynucleotides are also useful for producing polypeptides by recombinant techniques, and in chromosome identification. The present sequence represents human CTGF-2. Note: The present sequence given as SEQ ID No:2 in the sequence listing differs from that given in Fig 1 (ABU63223)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; cancer associated gene; cancer antigen; detection; cancer; diagnosis; cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antisheumatic; antiantici; antintic; antiinflammatory; antithyroid; antiallergic; antibacterial; cardiant; dermatological; neutroprotective; thrombolytic; coaquiant; noctropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoietic cell disorder; autoimmune disorder; haematopoietic cell disorder; autoimmune disorder; haemostatic; cardiovascular disease; organ rejection; neurological disease; drug screening.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention discloses the isolated human polypeptides, and polymucleotides encoding them, that have been designated SECX and NOVX. The polymucleotides can be used for treating, or delaying, the onset of an engiggenic-associated disorder for treating a pathological state in a sugisquence service of the polypeptides and polymucleotides of any one of the 12 presence of, or predafaposition to, a disease associated with altered levels of the polypeptides and polymucleotides of any one of the 12 sequences (SEC1-12), for raising antibodies, for identifying an agent that modulates the expression or activity of the polypeptide, for treating or preventing a NONX-associated disorder (NOV1-8) and as a pharmaceutical composition comprising the polypeptide, polymucleotide or the antibody. The polypeptides and polymucleotides are useful in diagnostic applications where their amounts are assessed, or for the manufacture of a medicament (e.g. gene therapy) for treating or preventing disorders or syndromes such as developmental disorders, immune diseases, sainal transduction pathway disorders, metabolic disorders, neurodegenerative disorders (including Alzheimer's disease and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human SECX/NOVX polypeptide useful for diagnosing, preventing or treating disorders associated with aberrant expression or activity of SECX/NOVX nucleic acids and proteins e.g., diabetes.

                                                                                                                                                         the cancerous state of prostate cells. Also disclosed is a method of assessing whether a patient is afflicted with prostate cancer. The method of the invention involves assessing whether a patient is afflicted with prostate cancer. The method prostate cancer by comparing the level of expression of a marker in a patient sample and the normal level of expression of the marker in a level of expression of the marker in the patient sample and the normal level indicates that the patient is afflicted with prostate cancer. Nucleic acids of the invention are useful for diagnosing or treating prostate cancer, and may be useful in gene therapy. Sequences given in AbB75177-AbB75611 represent marker cNN and proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This protein sequence comprises human cysteine rich protein 61 (Cyr61), an extracellular matrix signalling molecule. Its amino acid sequence was deduced from a human placental cDNA clone (see AAP94699). Cyr61 bolypeptides can be expressed in transformed or transfected host cells. Cyr61 can be used to modulate haematostasis, induce wound healing in a tissue, promote organ regeneration, improve tissue grafting or promote bone or prothesis implantation (claimed). It can also be used to screen for a modulator of angiogenesis, chondrogenesis, oncogenesis, cell adhesion, cell migration, cell proliferation, expand a population of undifferentiated haematopoietic stem cells in culture and to screen futogen (claimed). Ex vivo methods for using mammalian extracellular matrix signalling molecules to prepare blood products are also provided
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              358

involved in cellular response to growth factors. More particularly the invention is directed to cysteine-rich protein (Cyfel), and Cyfel-related proteins such as thorolast secreted protein (Cyfel), and Cyfel-related proteins such as thorolast secreted protein (Pispl2) and connective tissue growth factor (CTGF) and mucleic acid molecules encoding such secreted proteins. The polypeptides of the invention are members of cysteine-rich secreted protein family. Human Cyfel fragment is usseful in methods for screening modulators of cell adhesion, cell migration, fibroblast cell proliferation, angiogenesis, wound healing and Cyfel-integrin receptor interaction is used for the preparation of a medicament for the treatment of atheroscierosis heart disease, tumour metastasis, fibrosis, tumour growth, disorders associated with inadequate angiogenesis; aberrant granulation tissue development; aberrant fibroblast growth and wounds. Polynucleotides of the invention are useful in gene therapy. The present sequence is human The invention relates to extracellular matrix (ECM) signalling molecules Novel human cysteine-rich protein 61 (Cyr61) fragment useful in methods for screening for modulators of cell adhesion, fibroblast cell proliferation, anglogenesis and cell migration. Claim 30; Page 171-172; 186pp; English. Cyrel protein

Sequence 11, Application US/09853625B

Patent No. US20020049304A1

GENERAL INFORMATION:
PATENT IN THE PASTINGS, Gregg A. and Adams, Mark D.
TITLE OF INVENTION: Human CCN-Like Growth Factor
NUMBER OF SEQUENCES: 20
CORRESPONDENCE ADDRESS:
ADDRESSEE: CARELLA, SYRNE, BAIN, GILFILLIAN,
STREET: 6 BECKER FARM ROAD
CITY: ROSELAND
STATE: NEW JERSEY
COUNTRY: USA
ZIP: 07068
COMPUTER: NEW JERSEY
COMPUTER: NEW JERSEY
COMPUTER: NEW JERSEY
COMPUTER: NEW JERSEY
SOFTWARE: WORD PERFECT 5.1
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/09/853,625B
FILING DATE: JA HWAY-2001
CLASSIFICATION: CURROWNBELIGATION DATA:
APPLICATION NUMBER: US/09/853,587
FILING DATE: CHROWNAPPLICATION NUMBER: 33.073
REFERENCE/DOCKET NUMBER: 325800-442
TELEFAX: 201-994-1744

ALIGNMENTS

```
immediate early growth requisitory game CYR61.";

U. Biol. Chem. 275:28929-28936(2000).

I. FUNCTION: Promotes cell proliferation, chemotaxis, angiogenesis and cell adhesion. Appears to play a role in wound healing by upregulating, in skin fibroblasts, the expression of a number of genes involved in angiogenesis, inflammation and matrix remodeling including VBGA-A, VBGA-C, MMP1, MMP3, TIM1, uPA, PAI-1 and incepting alpha-3 and alpha-5 (By similarity). Cyr61-mediated gene regulation is dependent on heparin-binding (By similarity). Down-regulates the expression of alpha-1 and alpha-5 subunits of collagen type-1 (By similarity). Promotes cell adhesion and adhesive signaling through integrin alpha-1/beta-5 and cell proliferation through integrin alpha-1/beta-3 and cell proliferation through integrin approached and promotes cell adhesion (By similarity).

SUBUNIT: Interaction with integrins is heparin- and cell-type-dependent and promotes cell adhesion (By similarity).

SUBCELLUIAR LOCATION: Secreted.

SIMILARITY: Contains I IGPBP domain.

SIMILARITY: Contains I TSP type-1 domain.

SIMILARITY: Contains I TSP type-1 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright.         soluble form.

--- TISSUB SPECIFICITY: TESTIS, SPLEEN, KIDNEY, LUNG, HEART, AND BRAIN (LOWEST LEDGE IN TESTIS AND HIGHEST IN LUNG).

--- INDUCTION: By growth factors.
---- SIMILARITY: Delongs to the CCN family.
---- SIMILARITY: Contains 1 IGFBP domain.
---- SIMILARITY: Contains 1 TSP type-1 domain.
---- SIMILARITY: Contains 1 TSP type-1 domain.
---- SIMILARITY: Contains 1 C-terminal cystine knot-like (CTCK) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Cell adhesion; DNA synthesis; Extracellular matrix; Heparin-binding;

T factor (CTGF) containing module 4 alone stimulates cell adhesion.";

L J. Endocrinol. 176:R1-R7(2003).

-!- FUNCTION: Major connective tissue mitoattractant secreted by vascular endochelial cells. Promotes proliferation and divalent cation-dependent cell adhesion in many cell types including fibroblasts, myofibroblasts, endochelial and epithelial cells.

Enhances fibroblast growth factor-induced DNA synthesis.

-!- SUBGNILT: Monomer.

-!- SUBCELLUMAR LOCATION: Found in the extracellular matrix and as a soluble form (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     There are no restrictions on ng as its content is in no

Thromosomal gene and demonstration of promoter activity.";

Louding Sip-2000 to the EMBL/GenBank/DDBJ databases.

Submitted (SIP-2000) to the EMBL/GenBank/DDBJ databases.

- FUNCTION: Major connective tissue mitoatractant secreted by vascular endothelial cells. Promotes proliferation and differentiation of chondrocytes (By similarity). Mediates heparinced differentiation of chondrocytes (By similarity). Mediates heparinced including fibroblasts, myofibroblasts, endothelial and epithelial colls with synthesis (By similarity).

- SUBUNIT: Monomer (By similarity).

- SUBUNIT: Monomer (By similarity).

- SUBULLARITY: Belongs to the CCN family.

- SIMILARITY: Contains 1 UGFBP domain.

- SIMILARITY: Contains 1 UGFBP domain.

- SIMILARITY: Contains 1 TSP type-1 domain.

"Proviral rearrangements and overexpression of a new cellular gene
(nov) in myeloblastosis-associated virus type 1-induced
nephroblastcmas ";

Mol. Cell. Biol. 12:10-21(1992)

L. FUNCTION: IMMEDIATE-EARLY PROTEIN LIKELY TO PLAY A ROLE IN CELL
GROWTH REGULATION. ITS OVEREXPRESSION IS ASSOCIATED WITH
CON TOW GENE IN CHICKENE EMBRYONIC PIERCEMANL-TRUNCATED VERSION
CO NOW GENE IN CHICKEN SECRETCH, AND AT A LOWER LEVEL IN
MUSCLE AND INTESTINE, IN THE EMBRYO. LUNG AND LESS SO IN BRAIN AND
CO SPLEEN IN ADULT CHICKEN.
CO NOW GENE WHOSE TRANSCRIPTION IS NORMALLY ARRESTED IN
CONDUCT YIDNEY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright.
